# BIMServer installation instructions

The provided BIMserver in the shared [GoogleDrive](#) is the pre-compiled executable binary version, which means, installation will be happened with couple of clicks.

BIMServer is an open source project/development which is always under development. There is not a well-prepared documentation is available. You can check the official [website](#) to find something useful..

Since the development is continuous, the installation of BIMServer on your own computer **may go wrong**. This is mainly because in the change of BIMServer configuration or the Java configuration of your computer.

For installation:
1)   Download `BIMserver_preCompiled.jar` to your computer.
2)   Double-click on the file. You will see the following screen of **"BIMServer Starter"**.

3)   Click the **Start** button and wait for the necessary files' installation. (Depending on your computer's conf. it may take 3-4 mins.). **At this step, the installation may go wrong. If so, sorry :(**
4)   In the Log, when you see **"Server started successfully"** It means that everything is fine and BIMServer is installed successfully.
5)   At the last step, click the **"Launch Webbrowser"** button to access the BIMServer user interface.
        You can directly go to this address as well:
        `http://localhost:8082/apps/bimviews/?page=Login`
